

Please help... I can't figure out why I'm getting no signal in Sage TV from my Motorola DCH3200 STB connected via Firewire. I can record to a dump.ts through SgraphRecorder, and I can watch video through VLC media player.

SgraphRecorder.ini
settings

; Port is the port number that this network encoder will listen to commands
; from Sage on. Use this when setting up the network encoder in Sage.

[System]

Port=6969

; FileName is the name of graph to use. This graph should contain 1 instance
; of a "dump" filter that implements the IFileSink interface.

; TuningDelay is the number of milliseconds to wait after a channel change with

; Girder until the graph is started again.

[Graph]

C:\GRAPHEDIT\sgraphrecorder\sgr1.GRF

TuningDelay=0

UnloadGraphOnStop=1

UnloadGraphOnSwitch=0

; Set UseGirder to 1 to use Girder to change channel.

; Event to send to Girder will be string after GirderPrefix + channel number,

; for example "Channel1" (without the "" signs).

; The GirderIndividualNumbers controls if the whole channel number is sent in one

; event or if individual events is sent to Girder for each number in the channel.

; set it to 0 for events that looks like this "Channel791" and

; to 1 for "Channel7", "Channel9", "Channel1" with your actual prefix instead

; of channel of course. If GirderIndividualNumbers=1 the sequence is ended with an

; extra GirderPrefix without a number as an enter for the stb.

; Set GirderInterNumberTimeSpacing to number of milliseconds to wait between the

; individual numbers

; Configure host, port and password to Girder settings

[Girder]

UseGirder=0

GirderHost=127.0.0.1

GirderPort=1024

GirderPassword=

GirderPrefix=Channel

GirderIndividualNumbers=1

GirderInterNumberTimeSpacing=10

; The ExeTuner section is used to call another program to change channel.

; Set UseExeTuner to 1 to use this.

; The program indicated in ExeTunerPath will be called with the channel number as

; the only parameter. Provide the complete path to the Tuner program.

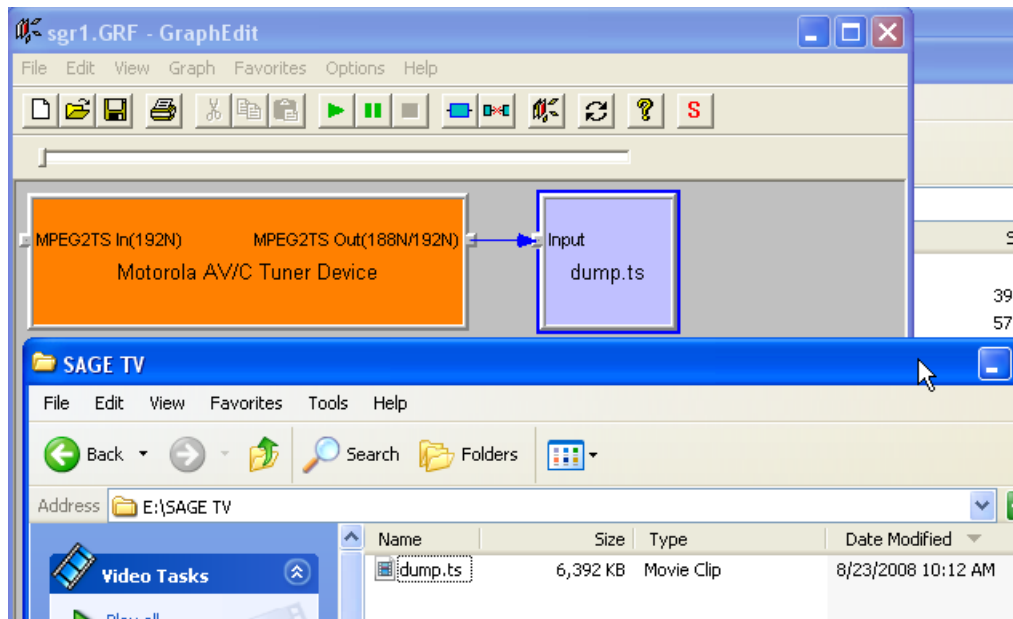

[ExeTuner]

UseExeTuner=1

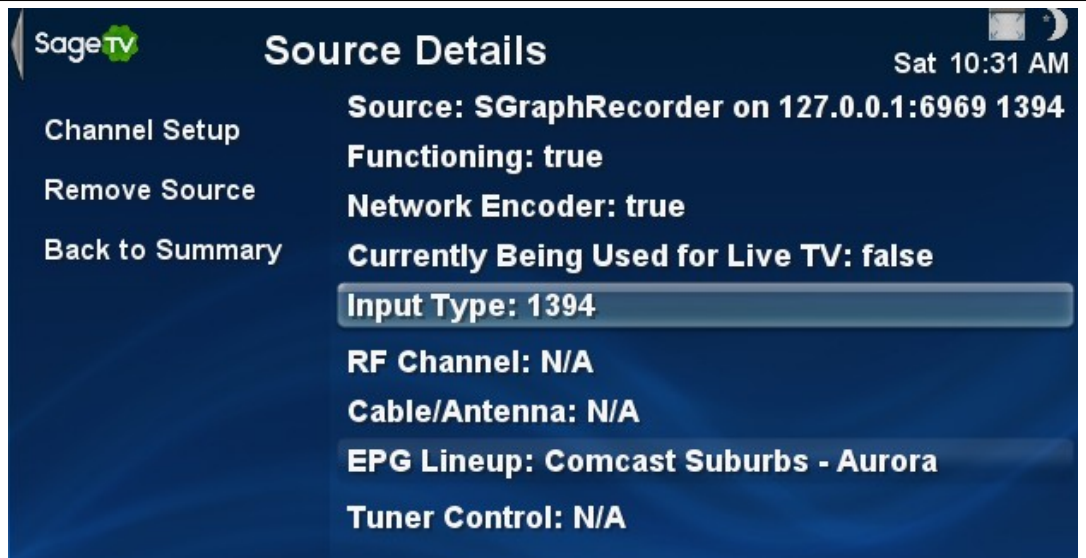

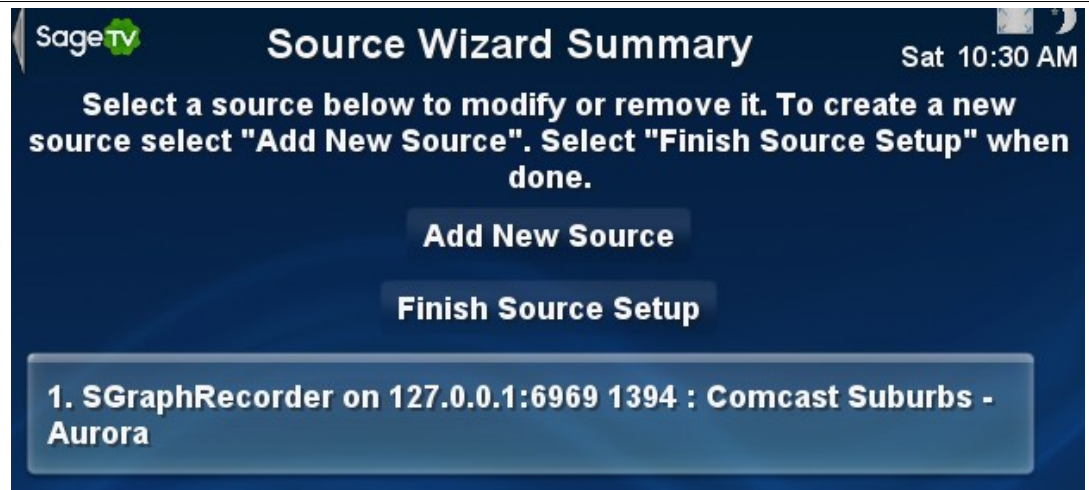

ExeTunerPath=C:\Program Files\Timmmore\MCE 2005 STB Controller\channelw.exe -f 2

When I run this grf in GraphEdit, the dump.ts performs perfectly, producing great audio and video.

I also get audio and video through VLC Media Player

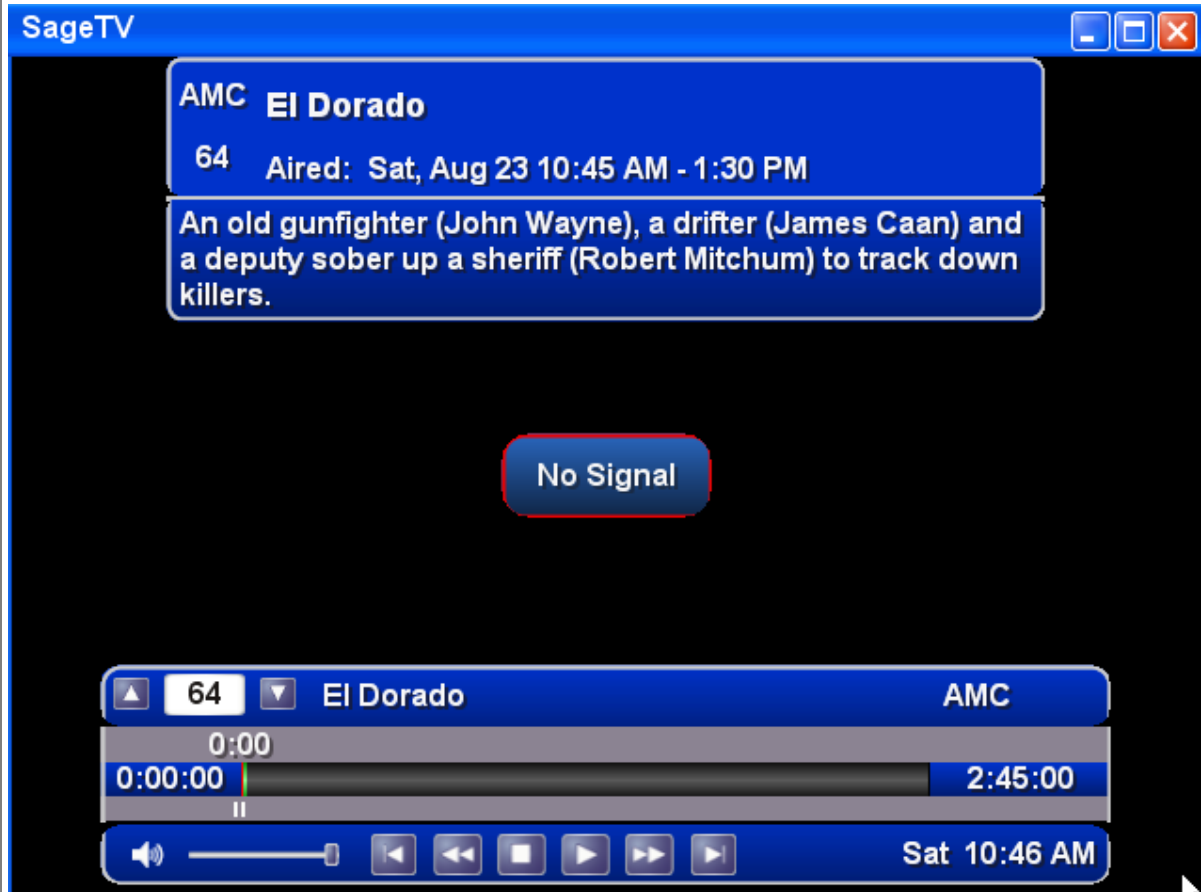

SgraphRecorder is running in the task bar prior to starting up Sage

No signal on any channel
