5 - DEFRAG

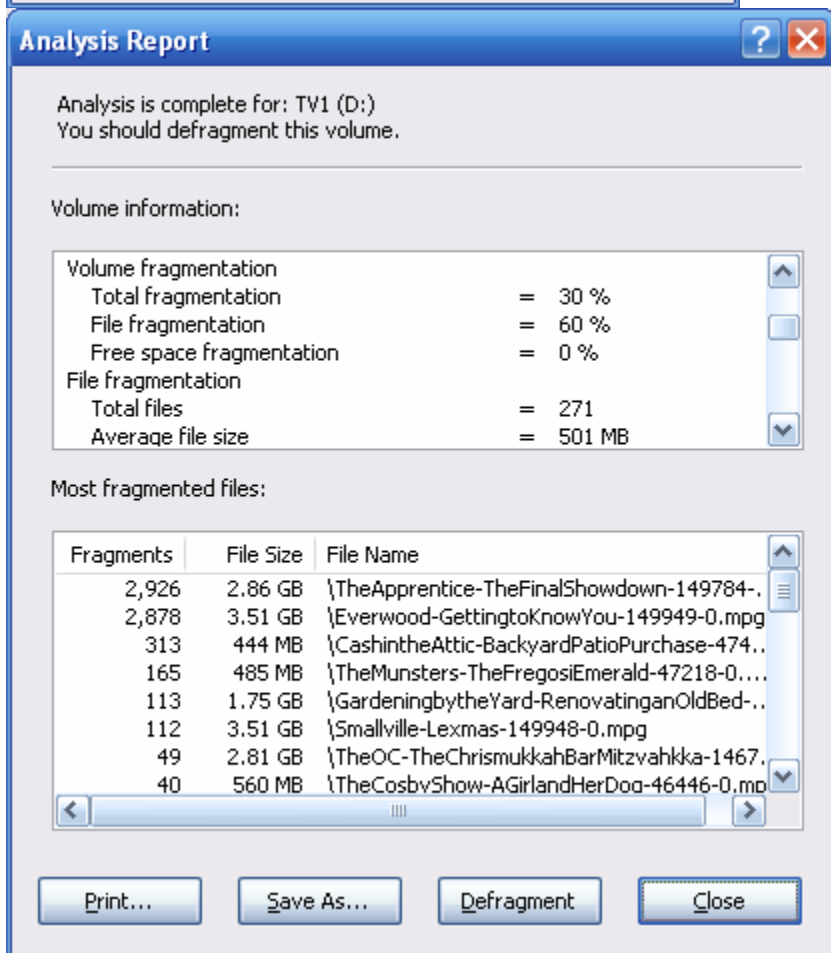

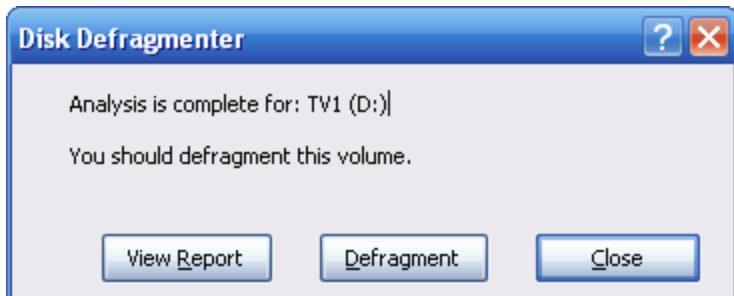

*I also noticed below I created C: Drive as a FAT32 Drive. **Should it be NTFS??** I know it is setup with 4k clusters. D: Drive is setup with 64k Clusters.*

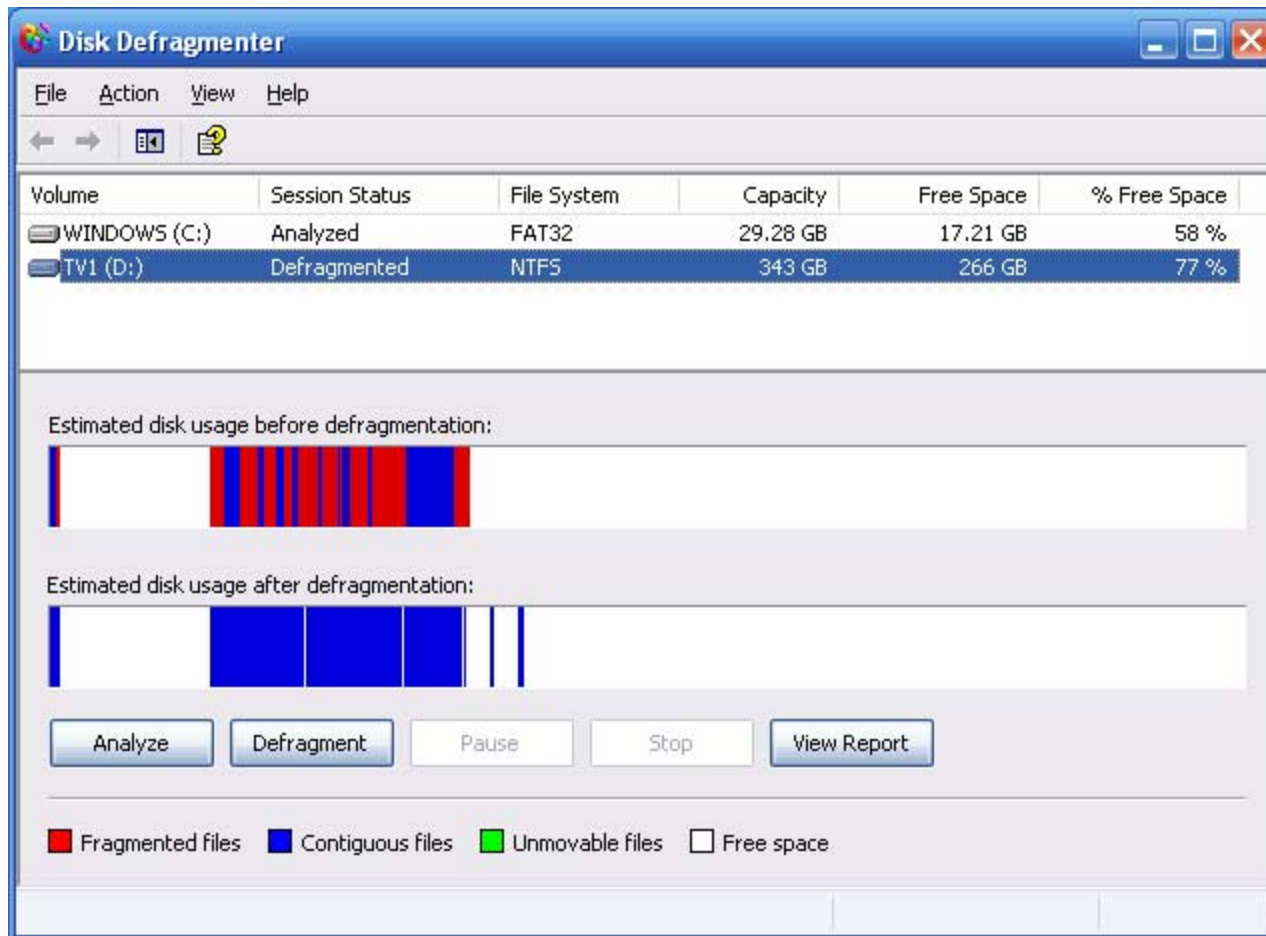

I Defragged C: Drive Anyway

I Defragged D: Drive

6 - RAM TEST

Used **Microsoft Windows Memory Diagnostic Tool** downloaded from;

<http://oca.microsoft.com/en/windiag.asp>

Ran 3 Passes of Standard Tests & 1 pass of Extended Test

RESULTS: ***Passed All***

7 - HARD DRIVE TEST

Used **Seagate SeaTools Desktop** for the 400GB Seagate Barracuda 7200.8 drive (ST3400832A) downloaded from;

<http://www.seagate.com/support/seatools/>

Ran 1 Quick Test and 1 Full Test

RESULTS: *Passed Quick Test, Failed Full Test - Failure recommended ScanDisk / Defrag. Ran both and did a Disk Cleanup as well.*

***NOTE!** When Sage was running during Defrag the system froze. I restarted, exited Sage and ran defrag on both drives. No instability??*
